Executive summary

NanoNetwork is a hyper deflationary token based on the Binance Smart Chain Network. NanoNetwork was created with the purpose of bringing investors a better and safer experience while buying, selling and trading all the different cryptocurrencies the space has to offer.

How will we do that?

One of our main goals is to create one of the safest wallets with an double-layer security and double authenticator verification. With many different features like, rug/honeypot checker, gas-less and much more. Thanks to our hardworking team and great partnerships everything is more than possible to secure the future of NanoNetwork.

The transaction tax for NanoNetwork is 12% on every buy & sell. It will be split up into four different sources: 5% to Reflections in \$VFX; 2% to our Liquidity Pool; 2% to strategic Buyback & Burn; and 3% to Marketing and Development of future utilities.

Our token distribution will be: 21% burned at launch; 15% reserved for private sale; 30% reserved for presale; 15% in locked liquidity; 10% for staking and CEX listings; and a 5% team wallet, vested for 2 year; 4% to partnerships and v1 holders.

To ensure that we don't have people selling huge amounts of tokens at once, which could have a detrimental impact on the project, we have decided to implement an anti-dump system that only allows people to sell 0.15% of total supply every 24 hours the first few weeks. We chose to have this instead of having a vesting period for the private and presale buyers.

When a transaction is executed, an automatic fee of 12% is in effect. This fee is split into 4 different sources: Reflections; LP; Buyback & Burn; Marketing and Development of future utilities.

Tokenomics

Supply:

1,000,000,000 tokens

Team wallet: 5% (vested for 24 months)

Liquidity: 16%

Burn: 19%

Staking, CEX & Unlocked: 10%

Private sale: 15%

Presale: 30%

V1 holders and partners: 5%

Tax: 12%

5% Reflections in \$VFX

2% Liquidity pool

2% Buyback & Burn

3% Marketing and Development

Liquidity Pool:

For NanoNetwork, the auto-liquidity is locked at 2%, which will be sent to the liquidity pool. This will increase the token's overall LP value and support the price floor of the token.

Reflections:

Reflections are the best way to benefit a community and give something back to them in the form of passive income. Each owner of NanoNetwork tokens is eligible to automatically receive \$VFX from the rewards pool.

We have chosen to have Vault Finance tokens as rewards because Vault Finance is a hard-working team and we believe they will bring much to the DeFi-space, which in turn has the potential to massively increase the value of our rewards. By having \$VFX as our reward token instead of \$BUSD, we are actually offering both to our community as \$VFX itself generates \$BUSD as rewards.

Buyback & Burn:

A buyback allows projects to invest in themselves. By then burning these tokens, it reduces the number of tokens available on the market, thereby increasing the proportion of shares owned by holders and raising their value.

Marketing and Development:

3% of the tax will go to Marketing and Development to help us create and promote our future utilities, organize marketing campaigns and arrange exchange listings.

Roadmap

Phase 1:

- KYC
- Audit
- Partnerships
- Private-sale
- Pre-sale
- Novation Listing
- Rewards dApp
- Staking
- Nano wallet

Phase 2:

- CoinMarketCap & CoinGecko listings
- Secret collaboration utility with Vault finance
- More DEX & CEX listings

Phase 3:

- Play2Earn (PVP/Farming)
- Crypto talk (communitiy app)
- Literally sending our token on a hard-drive to space

Utilities

NanoWallet

NanoWallet will be a fully gas-less web5 crypto wallet. Our wallet will come with a double-layer security, we will also have a double authenticator verification for making a trade to make our wallet as safe as possible. We will also add an rug/honeypot checker to help the traders identify possible rugpulls hidden in the smart contract or honeypots and important information about the liquidity of the project. Novation exchange will also be integrated into our wallet as a first alternative DEX. Novation exchange is a fully sell-less exchange which mean that it doesn't require the selling of the native token being traded to generate the rewards or to fund the buyback, marketing and development wallets. A fully gas-less wallet and a fully sell-less exchange combined together can't be much better.

CryptoTalk

CryptoTalk will be our Crypto community app. You will be able to see all of our updates and our future AMAs, as well as talk with and write to everyone in our community. We will also have a VIP room that you can subscribe to. In this VIP area, we will give our investors the opportunity to get involved in the project through voting polls and beta-testing, and they'll be the early recipients of any exciting news we have to share. In there, we will always be open to new ideas and suggestions that could benefit the project. We will also have weekly giveaways in our VIP room. We will also open this app up to any other crypto project so they can create vip rooms and community groups as well.

Secret collaboration utility with Vault finance

This revenue making utility will really help different types of businesses, e-commerce and people overall to prevent scams. This utility is something that every single person in the crypto space needs and it will have a huge impact on everyone.

Partnerships

Vault finance

Thanks to our strategic partnership with Vault finance we will also have a sell-less smart contract that doesn't require the selling of our native tokens to generate the VFX rewards, or to fund the buyback&burn, marketing and development wallets. Together with vault finance and other partnerships we will be able to bring the investors good revenue making utilities that can bring our project to great success.

Reflecto

Thanks to our partnership with Reflecto, they will help us create our gas-free Nano Wallet. Reflecto is a project with many different utilities and has a really professional dev team behind it.
